

# Different Audiences

These are the people who will contribute new functionality within your software

- you design your APIs to be modular so that new components can easily be created
- you are almost certainly a member of this audience as well: you are writing against your own API

# Different Audiences

These are the people who will wrap your platform into easy-to-use tools (e.g., CLI)

- you design your API to be powerful, so that a lot of meaningful work can be done with minimal code
- you are likely to be a member of this audience as well
